

SIS-SME

Using Eduzines – interactive, transmedial learning materials for smartphones – to build strategic innovation skills of SMEs

ON THE RIGHT TRACK!

MORE NEWS?

We were very happy to see each other during the January online meeting, where all the partners had a chance to reflect on the project achievements.

So far so good, an interim report is coming. Therefore, partners have set the list of tasks to be done by mid-March.

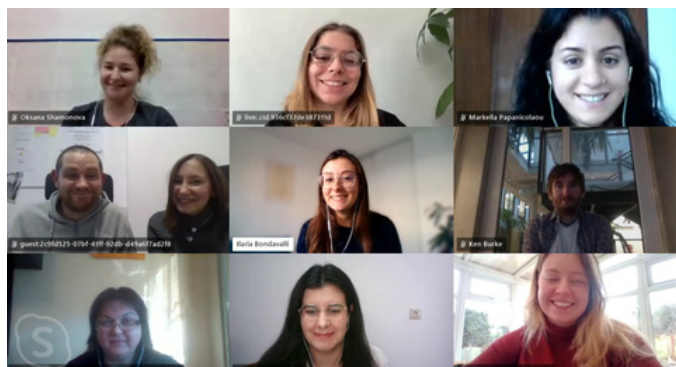

Meanwhile, partners also enjoy preparation of the activities aimed to improve the performance of digital education and to help European SME representatives to participate in the life-long learning.

Time flies fast and first two Intellectuals Outputs are reaching their finish lines:

- IO1- In-training Service is in its active phase. We have 1 month to carry out the testing and to give our feedback to the partners responsible for the IO.
- IO2- Compendium of interactive infographics is in its live stage as well. Thus, the value proposition and learning outcomes definition are done and seem clear to partners. Currently, we are working on the EduZines development.

STAY TUNED WITH US!

In addition to the Intellectual Outputs work, the Narrative Progress report has been completed by all our partners and subsequently we will complete the financial report.

A risk analysis has also been carried out by BRCCI-Bulgaria and we concluded that there was no risk to our beautiful project.

By the next meeting, which we hope to hold in a face-to-face mode, we need to finish the first Intellectual Output and test it during the LTA in Bulgaria, and then - in Spain. That is why we try our best to introduce to you our practices.
